ABOUT ME

I'm a curious and hands-on developer who loves building things from the ground up – especially systems that feel smart, efficient, and thoughtfully designed. Whether it's crafting an in-memory NoSQL database, experimenting with AI models, or diving deep into backend logic, I enjoy solving real problems with code. I'm always learning, always improving, and looking to join a team where I can grow while contributing meaningfully to the work that matters.

EDUCATION

**MANAV RACHNA
INTERNATIONAL
INSTITUTE OF
RESEARCH AND
STUDIES**

**BCA (AI&ML)
2024 – 2027**

SKILL

- Analytics & Insights
- Programming Languages:
Python, JavaScript, Bash
- Backend: Async
programming, REST APIs,
File-based systems
- Architecture: Modular
design, Middleware,
Caching
- Tools & Libraries: Pandas,
NumPy, Scikit-learn,
Matplotlib, Seaborn,
Jupyter, FastAPI, Git, Linux

AWARDS

- SOLVE-A-THON**– Ranked
among Top 25 participants
across college peers

WORK EXPERIENCE

**TATA DATA VISUALISATION: EMPOWERING
BUSINESS WITH EFFECTIVE INSIGHTS JOB
SIMULATION**

JULY 2025

- Completed a simulation involving creating data visualizations for Tata Consultancy Services
- Prepared questions for a meeting with client senior leadership
- Created visuals for data analysis to help executives with effective decision making

**GE AEROSPACE EXPLORE ENGINEERING VIRTUAL
EXPERIENCE PROGRAM**

JULY 2025

- Completed a job simulation where I advised on alternative energy sources for a hypothetical Aerospace team at GE
- Analyzed and compared diverse energy sources for propulsion systems, including cost, energy density, storage requirements, and how they impact design decisions
- Conducted in-depth research on bypass ratio and compression ratio and their impact on turbofan engine design, including fan diameter, noise, installation considerations, material limitations, and emissions implications

**CREATOR & LEAD DEVELOPER – ELECTRUS
NOSQL DATABASE**

JAN 2025 – PRESENT

Built a lightweight, in-memory NoSQL database with JSON-based persistence, ACID-compliant transactions, and MongoDB-style querying. Designed its modular architecture with a custom query engine, support for indexing, aggregation, joins, and async-safe file handling.
